Duong Binh An

Software Engineer · Backend & Full-Stack · Enterprise Systems

Ho Chi Minh City, Vietnam | andbdev1703@gmail.com | duongbinhan-dev | AnBinh1703

Professional Summary

Software Engineer with experience in backend and full-stack development, specialising in enterprise logistics systems and service integration using .NET and React. Currently building container-tracking and invoicing platforms at SP-ITC (Saigon Port), with a growing applied interest in machine learning through academic and personal projects in computer vision and fraud analytics. Committed to clean architecture, maintainable systems, and practical engineering.

Technical Skills

Backend	C#, ASP.NET Core (.NET 6/8), REST APIs, Entity Framework Core, PHP
Frontend	React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3
Databases	SQL Server, MySQL, PostgreSQL, MongoDB, Redis, Firebase
DevOps	Docker, Linux (VPS/Ubuntu), Git, GitHub Actions, Nginx
Applied AI	Python, PyTorch, scikit-learn, FastAPI, MLflow, Jupyter Notebook
Methods	Clean Architecture, Agile/Scrum, RESTful API design, Containerisation

Professional Experience

Software Engineer (Full-Stack) Mar 2025 – Present
SP-ITC – Saigon Port (International Container Terminal)

- Developed enterprise backend services for container tracking and freight invoicing using **ASP.NET Core, C#, and SQL Server**, supporting core port logistics operations.
- Refactored legacy frontend Webpack modules into a structured **React/Next.js** application, improving code maintainability and reducing front-end integration friction.
- Bridged **PHP**-based legacy components with new .NET APIs, enabling unified data flow across heterogeneous system layers.
- Containerised application services using **Docker** on Linux VPS, standardising the deployment pipeline and reducing environment-specific failures.
- Diagnosed and resolved production issues, contributing to improved system stability and reduced unplanned downtime.

.NET Developer Intern Sep 2023 – Dec 2023
AmazingTech

- Implemented backend features for assigned modules using **ASP.NET Core**, following established architecture and coding standards.
- Investigated and resolved defects through structured debugging and unit testing, improving sprint-level code reliability.
- Collaborated within an **Agile/Scrum** team, participating in sprint planning, stand-ups, and code reviews.

IT Support Specialist Nov 2021 – Aug 2023
FPT University

- Provided technical support for 1,500+ students and staff across university internal systems, covering hardware, software, and network issues.
- Developed automation scripts to reduce manual IT administration tasks and improve support response time.
- Conducted technical training for IT club members, improving peer competency in system administration and troubleshooting.

Selected Projects

Real-Time Banking Fraud Detection and Decision Support System *github.com/AnBinh1703 [Group project – lead]*

- Designed and led a full-stack fraud analytics platform combining ML risk scoring, policy-based decision routing, and analyst case-management workflow.
- Built **FastAPI** services for transaction scoring, alert creation, and case lifecycle management; integrated **MLflow** for experiment tracking and model versioning.
- Implemented observability with **Prometheus** metrics and **Grafana** dashboards; deployed the full system via **Docker Compose**.
- Stack: Python, FastAPI, scikit-learn, MLflow, Prometheus, Grafana, Docker Compose *(academic project)*

Medical Image Classification: ViT vs. CNN/ResNet *github.com/AnBinh1703*

- Conducted comparative evaluation of CNN, ResNet-50, and Vision Transformer (ViT) for multi-label chest disease classification on the **NIH ChestX-ray14** dataset (112,120 images, 14 disease labels).
- Built config-driven training scaffolding with YAML inheritance, patient-level train/test splits to prevent label leakage, and structured experiment notebooks.
- Stack: Python, PyTorch, torchvision, YAML configs *(research project)*

Camera Rental Services Platform

- Built a peer-to-peer camera rental marketplace with booking, authentication, and payment integration. Stack: React, ASP.NET Core, Firebase, Docker

University Event Management & Ticketing System

- End-to-end event system covering registration, sponsor tracking, and online payment via **VNPay**. Stack: React, ASP.NET Core, SQL Server, VNPay

UniProjectHub – Student Project Collaboration Platform

- Collaborative platform for organising and tracking academic projects with role-based access control. Stack: ASP.NET Core, SQL Server, Docker

Education

Bachelor of Science in Software Engineering
FPT University, Ho Chi Minh City

- Relevant coursework: Software Architecture, Database Systems, Algorithms & Data Structures, Machine Learning, Data Mining.

Languages

Vietnamese — Native **English** — Professional working proficiency
